Such is the scope of Dr. Lee's book, and it must be apparent that in it he has not borne out the promise of his preface. The bulk of the volume is legal history, pure and simple, and much the greater part, history of Roman law. Of Historical Jurisprudence (if such a thing exists) we find little outside the Introduction. We do find a useful elementary history of most of the systems of law that can interest us, presented clearly and judiciously.

JOSEPH H. BEALE, JR.

The History of Colonization, from the Earliest Times to the Present Day. By HENRY C. MORRIS. (New York and London: The Macmillan Co. 1900. Two vols., pp. xxiv, 459; xiii, 383.)

THIS book, the author says, owes its origin to "a natural interest in the affairs of the day." The recent war with Spain, leading to the acquisition of distant dependencies by the United States, interested Mr. Morris in colonial problems, and he sought in the history of colonization answers to the questions that the present position of our country stimulates. He found that many books had been written on colonies, but that "almost all are devoted to certain special phases, epochs, or fields of research, are written from the standpoint of some one nation, or are too technical to be available and interesting to the majority of readers." To fill the want implied, of a treatise on colonization covering the whole field and suited to the comprehension of the general public, this book was prepared. The introduction promises to the reader a discussion of the different types of colonies and of the conditions necessary to their success, and an exposition of the facts of their history that will show how the principles of colonial policy have been developed.

The task that Mr. Morris sets before himself is a difficult one. Most books on colonization confine themselves to some part of the field simply because colonies have differed so much in different periods, or under different conditions in the same period, that they do not lend themselves to the generalizations of the philosophic historian, and resist inclusion in a single book. A writer who would give us what Mr. Morris promises must be not only conversant with a very broad range of facts, but also endowed with a critical and constructive ability enabling him to use the facts with the utmost efficiency. Extensive reading and thorough training are the two requisites. The author of this book cannot be credited with a satisfactory measure of either.

In the preliminary chapter, on general principles, Mr. Morris shows such confusion of ideas as to destroy at once any hope that he can advance our knowledge of the theory of colonization. The reader is forced to doubt whether the author understands what has already been written on the subject, and whether he is competent even to compile the results of others' investigations. In a book of this kind the matter of classification is of primary importance, if we are to learn anything of the principles of colonization. But even in proposing a scheme of classification,

apart from any practical application of it, the author breaks down. He adopts Roscher's fourfold classification of colonies, but spoils its meaning by making the mode of acquisition, not the prevailing occupation, the distinguishing characteristic. Thus Roscher's *Eroberungskolonien* appear in his first class as "those created or acquired by military force." Such a class includes several kinds of colonies which need to be kept distinct, and does not distinguish the peculiar and interesting type for which Roscher designed it, the type in which the settlers gain a return not from economic production but from political ascendancy. The author does not, however, make a fruitful use of this or any other classification; he applies one or another without discrimination when he applies one at all.

Mr. Morris accepts anything that has been written on colonization, and finds a place for it somewhere. Statements that meant something in their original context become meaningless or inconsistent when they appear in the setting which he gives them. On page 11 we are told, in reference to the relation of mother country and dependency, that an agricultural colony "occasions little cash outlay; returns in general large profits. . . . These facts are well established by the evidence of history." On page 26 we are cautioned to remember our Leroy-Beaulieu, "It must never be forgotten, 'It is exceedingly rare that a colony furnishes a net profit to the mother country; in infancy it cannot, in maturity it will not.'" When one general statement is not contradicted by another it is generally disproved by facts given in the body of the book. Of the many examples of weak generalization that could be cited I select only one, the statement that throughout history "the colony the most distant from the mother country and the most unlike in climatic and agricultural conditions has always proved the most successful, prosperous and remunerative" (I. 22).

A study of the preliminary chapter will convince any reader who is at all conversant with the subject of colonization that he cannot expect to find the book of value except for the bare facts that it comprises. His interest then will lie in knowing the sources from which the facts are drawn; if he is denied original arrangement of the material and conclusions from it, he will hope that at least the facts are sound, and that the book will guide him to the best sources of information.

At first view one is impressed by the wealth of footnotes and by the bibliography, which covers more than thirty pages of fine print. But the longer one studies these the more disappointed does one become. A large part of the bibliography is simple padding. Colonization is a broad subject, but not so broad as universal history, and the bibliography covers pretty nearly that. Even though sections of it are distinguished as containing books not specifically devoted to colonization but "general works which are useful" there seems no excuse for including in these sections books like Caesar's *Commentaries* or Froissart's *Chronicles*. We are gravely warned that Ingulph of Croyland (that distinguished authority on colonization!) is now regarded as spurious. And the books which really have some bearing on colonization seem to have been sub-

mitted to no critical examination ; old and new, good and bad, are lumped together. There are some serious omissions in the bibliography, but many good books do appear there, and it is only to be regretted that these do not take a more prominent place in the body of the book.

The foot-notes which indicate (not always correctly), the authorities for statements in the text, betray an astonishing lack of critical perception on the part of the author. Apparently all books are to him equally trustworthy. A favorite authority for facts in any period of history is Cantù, *Storia Universale*, Turin, 1857, a compilation which was not considered reliable at the time when it was written, though the standard for such books was much lower than it is to-day. Even old Rollin figures among the authorities in the notes, though his name is decently omitted from the bibliography to make place for the more imposing Dionysius of Halicarnassus and Ammianus Marcellinus. For conditions in ancient Greece we are referred to *The Wealth of Nations*, for the causes of the decline of the Dutch East India Company to Miss Scidmore's *Java*; these are both of them excellent books, but they are hardly satisfactory for the purpose in hand. Good books are cited in the notes, but much oftener apparently than they were used by the author. Thus the name of Heyd's *Geschichte des Levantehandels*, the great secondary authority for Italian settlements in the East, appears not infrequently in the section devoted to medieval colonization, but little use is made of the valuable material in the book, and the author quotes about as much of it indirectly from Adams's *Civilization* as he does from the original.

There seems no need to discuss the contents of the book in detail, or to point out its errors in fact. The first part of Volume I., devoted to colonization in antiquity and in the Middle Ages, is especially poor. The modern period is better treated and as the history approaches the present day it constantly improves. In writing the history of recent events Mr. Morris shows a command of facts and a sense of proportion which are missing in the greater part of his work. It is a pity that he dissipated his energies over so broad a field.

The book will probably be well received by the public, for its subject is popular now and in general its style is agreeable, but it can make no claim to the attention of the student or the scholar.

Sesostris. Von KURT SETHE. ["Untersuchungen zur Geschichte und Alterthumskunde Aegyptens," II. 1.] (Leipzig: Hinrichs. 1900. Pp. 24.)

OF all the puppets which have been made to dance upon the stage of Egyptian history in response to Greek imagination, the most remarkable is that of Sesostris. The readers of this journal are too familiar with the fabulous achievements attributed to him by Herodotus, Diodorus, and all the rest, to require even a reference to them here. The question of
